Technology Leader — Applied AI in Production & 0-to-1 Delivery | Governed AI · Data Teams

PROFESSIONAL SUMMARY

Technology leader who takes AI into governed production in a regulated enterprise and turns it into productivity gains, with 18+ years in IT and leadership roles across a Tier-1 bank, start-ups and scale-ups, and consumer internet platforms. Began as an engineer and technical lead at Renren, Sohu and Baidu, then held head-of-technology roles from 2016 to 2020.

Since 2022, a Vice President in UOB's Group Technology & Operations, leading 25 onshore and offshore engineers on mission-critical payment and lending platforms. In that role, designed and built a production AI code-review service and an AI agent for document validation, and set the human-in-the-loop rule that governs the code-review service.

Combines start-up 0-to-1 delivery and data-team leadership with the security, privacy and reliability that a large enterprise expects. Reports status, risks and decisions to senior management, the steering committee and the business team, and holds decision or joint-decision authority on vendor selection and technology investment.

CORE COMPETENCIES

Applied AI in Production	AI agents on headless Claude Code, comparing prompt versions (A/B evaluation), AgentOps/LLMOps practice, taking an AI service through formal architecture and risk approval into production
AI Governance & Privacy	Human-in-the-loop AI governance aligned with Singapore's MAS FEAT principles, encryption and role-based access control for sensitive data, secure SDLC, data privacy impact assessments
0-to-1 Builds & MVPs	0-to-1 platform builds, MVP scoping and sequencing, production-ready handover through CI/CD quality gates and acceptance-test sign-off
Data & Analytics	Leading big-data teams on Spark, Hive and HBase; Kafka messaging; customer data models for portfolio analysis; SQL
Enablement & Change	Coaching engineering teams on AI-assisted engineering, introducing Agile/Scrum from scratch and CI/CD, contributing to bank-wide engineering standards
Stakeholders & Commercial	Senior management and the steering committee, vendor selection and governance, technology-investment decisions, technical bids, cross-time-zone teams
Platforms & Cloud	Java, Spring Boot, Spring Cloud, Apache Camel, microservices, AWS, Kubernetes, Docker

SELECTED ACHIEVEMENTS

- **Governed production:** Designed and built an AI code-review service in a regulated Tier-1 bank — a Spring Boot service runs headless Claude Code agents on each pull request, reviewing security, performance, correctness and maintainability alongside SonarQube — live since May 2026 after formal architecture and risk approval.
- **Productivity gain (estimate):** Cut senior engineers' code-review time by an estimated ~80%: the AI clears syntax and basic issues, so human review rounds fall to 1–2 per pull request and reviewers focus on design and risk.
- **Responsible AI:** Set the governance model so the AI advises but never approves or merges, in line with MAS FEAT responsible-AI principles; contributed to a production retrieval-augmented generation (RAG) knowledge assistant used across departments, with access controls and data masking.
- **Workflow automation agent:** Personally built an AI agent that generates validation prompts to check that eMemo and quotation documents are consistent in structure and data relationships, removing a recurring manual reconciliation task.
- **Data teams:** Led the big-data team that built VV Technology's data-analysis platform on Hive and Spark; earlier led AI Park's big-data team for millions of real-time sensor and transaction events.
- **0-to-1 delivery:** Led VV's 140-person technology organisation through its managers and built its microservices platform from scratch, owning technology selection and the technology budget; delivered the first release of its local-life services platform in 2019, including the payment subsystem.
- **Enablement and change:** Introduced Agile/Scrum from scratch at Golden Bridge and CI/CD, code standards and containerised deployment at VV Technology; at UOB, contributed to bank-wide SDLC, coding and code-review standards.

PROFESSIONAL EXPERIENCE

United Overseas Bank (UOB) | Singapore — Oct 2022 – Present

Vice President (VP2) / Technical Delivery Manager — Real-Time & Payment Data Services, Group Technology & Operations

Technology leader for two mission-critical platform lines in a regulated Tier-1 bank — cross-border payments and retail unsecured lending — serving millions of accounts.

Applied AI & Automation

- Designed, built and took the AI code-review service into production: briefed senior management on the case and the governance model, and improved review quality through prompt A/B testing and AgentOps/LLMOps practices.
- Coach engineering teams on AI-assisted engineering practices and tooling.

Platforms & Data

- Led the 10-engineer backend team of a regional customer-360 platform that takes daily account summaries from core banking for portfolio analysis; designed its customer data models and personally built its data-analysis module and scheduled batch jobs.
- Led end-to-end design of a payment-initiation hub on Java, Spring Boot and Apache Camel — API contracts, orchestration, validation and status tracking — integrating channels, reference data and third-party banking systems.
- Stay hands-on alongside delivery: review newly submitted core pull requests daily, co-design solutions with engineers, own the architecture, write core modules for significant changes and resolve production issues.

Delivery & Governance

- Hold decision or joint-decision authority on technology investment, vendor selection, and statement-of-work (SOW) and licence negotiation, and chair governance of four IT service vendors.
- Work closely with teams in India, Thailand and Indonesia across time zones.
- Planned and architected the phased move of cross-border payments to ISO 20022 (SWIFT's MT-to-MX migration), running old and new message formats side by side: new-format messaging went live in May and August 2025, ahead of SWIFT's November 2025 deadline, and the old path was retired in August 2026 with no service interruption.
- Resolve schedule conflicts between the two platform lines by agreeing MVP scope with the requirement, project and technical leads, confirming dependencies and setting a sequence all parties accept.
- Established delivery KPIs (deployment frequency, mean time to recovery, incident trend, change-failure rate), CI/CD quality gates and test sign-off for every release.
- Coordinate P1–P3 production incidents end to end, from escalation and stakeholder communication to root-cause analysis and post-incident reports.

Golden Bridge Drive (SG) Pte. Ltd. | Singapore — Nov 2020 – Jul 2022

Project Manager & Architect

- Architected and delivered, from 0 to 1, a multi-tenant SaaS platform for online-game businesses on AWS — KYC, bonus incentives, VIP tiers, analytics and multi-channel payments — on Spring Cloud and Kubernetes.
- Led a 40-person project team, including outsourced staff, introduced Agile/Scrum from scratch and CI on Jenkins and Amazon ECR, and owned delivery budget, capacity and launch readiness.
- Applied data privacy impact assessments, API and database encryption and credential management to the AWS deployment, and led data migration.

VV Technology Pte. Ltd. | Singapore — Apr 2019 – Jun 2020

Head of Technical Centre

VV-Life: a data-driven local-life services platform connecting offline merchants in food, fresh produce, travel and everyday services.

- Designed for performance with Spring Cloud microservices, Kafka-based asynchronous processing and caching that kept load off the database, bringing service response times to the millisecond level.
- Designed the payment subsystem, which integrated UnionPay, Visa/Mastercard, Google Pay and GrabPay payments with settlement reconciliation.
- Designed the shared back-end platform architecture (Spring Boot, MySQL cluster, Redis, RocketMQ) for a B2B online-office product serving Southeast Asia, governing solution design, cost evaluation, staffing and acceptance.
- Defined production-incident priority levels and tiered emergency-response plans.

AI Park | China — Apr 2016 – Sep 2017

VP of Technical Department

- Led architecture, delivery, budget and the technical team for a smart-parking IoT platform connecting car parks to the cloud for automated management, online payment and recommendations.
- Added an AI processing step to licence-plate and portrait recognition to improve recognition speed and accuracy.
- Led technical bids that won city parking projects in Shijiazhuang, Handan and Beijing, and launched pilots in Shijiazhuang (2016), Handan (2017) and Beijing Chaoyang (2017).

EARLIER EXPERIENCE

- **Hengshunyuan Information Technology — Co-founder (Oct 2017 – Sep 2019, China):** Owned product, architecture and delivery of an audio-learning platform for workplace and early-childhood content, reaching a peak of ~100k daily active users.
- **Baidu — Technical Specialist, Nuomi group-buying e-commerce platform (May 2014 – Dec 2014, China):** As project leader, re-architected the merchant-side order system on Dubbo microservices and delivered two months ahead of plan.
- **Sohu.com — Technical Leader / Project Leader, Sohu News content platform (Mar 2012 – May 2014, China):** Led the re-architecture of Sohu's fifth-generation CMS onto Spring MVC and a Redis cluster, and delivered its OpenAPI messaging platform.
- **Renren Network — Senior R&D Engineer (Jul 2008 – Mar 2012, China):** Developed Renren's shopping website, Renren Mall and CRM.

EDUCATION, CERTIFICATIONS & LANGUAGES

- Master's degree in Computer Science and Technology — Liaoning University (2005 – 2008)
- Bachelor's degree in Applied Mathematics — Shenyang University of Technology (2000 – 2004)
- Software Designer (Intermediate) — Qualification Certificate of Computer and Software Technology Proficiency (2006) · PMP — in progress · Site Reliability Engineering (SRE) — formal training
- Languages: English and Mandarin (professional working proficiency in both)
