Technology Transformation Leader — Regulated Platform Modernisation · AI Adoption · Programme & Vendor Governance

PROFESSIONAL SUMMARY

Technology transformation and programme leader with 18+ years across a Tier-1 bank, fintech and SaaS start-ups, and consumer internet platforms. Modernises mission-critical payment platforms inside a regulated financial institution and takes AI into governed production, with the engineering background to challenge architecture and delivery trade-offs rather than only track them.

At UOB since 2022, owns the move of cross-border payments to ISO 20022 through a phased migration that kept payments running without interruption. In parallel, built AI tools for code review and document validation and coaches teams on AI-assisted engineering under human-in-the-loop governance.

From 2016 to 2022, led technology and delivery for digital platforms at start-ups and scale-ups — a smart-parking IoT platform through its city pilots, VV Technology's local-life platform and a multi-tenant SaaS platform — building teams and delivery processes from scratch at VV and Golden Bridge. Brings that pace to vendor-heavy, regulated delivery today. PMP certification in progress.

CORE COMPETENCIES

Transformation Programmes	Roadmaps, initiatives and interdependencies; RAID (risks, assumptions, issues, dependencies); scope, schedule and delivery budget; phased migration and cut-over; release cadence
Platform Modernisation	ISO 20022 (SWIFT MT-to-MX) migration of cross-border payments, hand-off to core banking for settlement, regional customer-360 data platform, 0-to-1 digital platforms on microservices and AWS
AI Adoption	Production AI code review; a document-validation agent; human-in-the-loop governance aligned with MAS FEAT AI principles; contribution to a retrieval-augmented generation (RAG) assistant
Governance & Risk	Steering committee and decision forums, delivery KPIs, SIT/UAT sign-off, change control and Change Advisory Board (CAB) approval, secure SDLC, MAS TRM (Singapore technology-risk rules)
Vendors & Commercial	Vendor selection, SOW/licence negotiation, technology-investment decisions, delivery budget, vendor performance and accountability reviews, onshore/offshore delivery teams
Stakeholders & Change	Business, operations, compliance, architects and engineering managers; Agile adoption from scratch; cross-time-zone teams in India, Thailand and Indonesia
Methods & Tools	Agile/Scrum, hybrid Waterfall, Jira, Confluence, MS Project; Java, Spring Boot, microservices, AWS, Kubernetes

SELECTED ACHIEVEMENTS

- **Payments modernisation:** Planned and architected the phased move of cross-border payments to ISO 20022 (SWIFT's MT-to-MX migration), running old and new message formats side by side: new-format messaging went live in May and August 2025, ahead of SWIFT's November 2025 deadline, and the old path was retired in August 2026 with no service interruption.
- **AI into governed production:** Designed and built an AI code-review service, live since May 2026 after formal architecture and risk approval: AI agents review each pull request but never approve or merge, cutting senior engineers' review time by an estimated ~80%.
- **Vendor and partner ecosystem:** Chair governance of four IT service vendors — budget, performance and accountability reviews — and hold decision or joint-decision authority on technology investment, vendor selection and SOW/licence negotiation.
- **Governance that holds:** Established delivery KPIs — deployment frequency, recovery time, incident trend and change-failure rate — with SIT/UAT sign-off for every release.
- **Automation of a manual process:** Personally built an AI agent that checks eMemo and quotation documents against each other, removing a recurring manual reconciliation task.
- **Technology organisation:** Led VV's 140-person technology organisation through its managers and delivered the first release of the VV-Life local-life platform in 2019, including its payment subsystem.
- **Priorities across two platform lines:** Resolve schedule conflicts between the two platform lines by agreeing MVP scope with the requirement, project and technical leads, confirming dependencies and setting a sequence all parties accept.

PROFESSIONAL EXPERIENCE

United Overseas Bank (UOB) | Singapore — Oct 2022 – Present

Vice President (VP2) / Technical Delivery Manager — Real-Time & Payment Data Services, Group Technology & Operations

Technology delivery owner for two mission-critical platform lines in a MAS-regulated Tier-1 bank — cross-border payments and retail unsecured lending — leading 25 onshore and offshore engineers through squad leads and engineering managers.

Transformation Programme Delivery

- With a 15-engineer onshore/offshore team (part of the 25), own end-to-end delivery of the payments modernisation programme — scope, roadmap, RAID, dependencies, release planning and production rollout — shipping upgrades every 2–3 months.
- Led end-to-end design of the payment-initiation hub, integrating channels, reference data and vendor systems: it hands validated payments to core banking, which executes settlement, and processes the results returned.
- Led the 10-engineer backend team of a regional customer-360 platform in production since 2022; it takes daily account summaries from core banking for portfolio analysis and serves APIs to multiple business lines.
- Own technology for retail unsecured-lending servicing — payment initiation, validation and lifecycle tracking — and post-disbursement collections across credit-card and unsecured-loan portfolios.

AI Adoption & Change

- Took the AI code-review service through formal architecture and risk approval into production: briefed senior management on the case, and improved review quality by testing alternative prompts (prompt A/B testing).
- Coach teams on new delivery practices and AI-assisted engineering, under a governance model in which the AI advises but human reviewers keep approval and merge authority.
- Contributed to a production retrieval-augmented generation (RAG) knowledge assistant used across departments (2025), with access controls and data masking in place.

Governance, Risk & Production

- Personally prepare the change request for every production release on both platform lines and present the go-live plan, risk controls, rollback plan, test results and database changes to the Change Advisory Board (CAB).
- Coordinate P1–P3 production incidents end to end — escalation, stakeholder communication, root-cause analysis and post-incident reports — and produce technical incident analyses that support the bank's regulatory reporting to MAS.
- Contributed to bank-wide SDLC, coding and code-review standards and to architecture-review governance; run secure SDLC, data-protection impact assessments and data governance in line with MAS TRM.
- Led API and database encryption of sensitive data, credential management and data migration for the payment, lending and customer-data platforms.
- Stay hands-on alongside delivery: review newly submitted core pull requests daily, co-design solutions with engineers, own the architecture, write core modules for significant changes and resolve production issues.

Golden Bridge Drive (SG) Pte. Ltd. | Singapore — Nov 2020 – Jul 2022

Project Manager & Architect

A multi-tenant SaaS platform for online-game businesses, built 0-to-1 on AWS.

- Led a 40-person project team, including outsourced staff, introduced Agile/Scrum from scratch and CI on Jenkins and Amazon ECR, and owned delivery budget, capacity and launch readiness.
- Ran hybrid delivery — Waterfall for scope and budget, Agile sprints for execution.

VV Technology Pte. Ltd. | Singapore — Apr 2019 – Jun 2020

Head of Technical Centre

VV-Life: a local-life services platform connecting offline merchants — food, fresh produce, travel and everyday services.

- Built VV's microservices platform from scratch on Spring Cloud, Kubernetes, Redis and AWS, owning technology selection and the technology budget.
- Designed the payment subsystem, which integrated UnionPay, Visa/Mastercard, Google Pay and GrabPay payments with settlement reconciliation.
- Designed the shared back-end platform architecture (Spring Boot, MySQL cluster, Redis, RocketMQ) for a B2B online-office product serving Southeast Asia, governing solution design, cost evaluation, staffing and acceptance.
- Introduced CI/CD, code standards and containerised deployment with rollback on Kubernetes; defined production-incident priority levels and tiered emergency-response plans.

AI Park | China — Apr 2016 – Sep 2017

VP of Technical Department

- Led architecture, delivery, budget and the technical team for a smart-parking IoT platform connecting car parks to the cloud for automated management, online payment and recommendations.

- Led technical bids that won city parking projects in Shijiazhuang, Handan and Beijing, and launched pilots in Shijiazhuang (2016), Handan (2017) and Beijing Chaoyang (2017).

EARLIER EXPERIENCE

- **Hengshunyuan Information Technology — Co-founder (Oct 2017 – Sep 2019, China):** Owned product, architecture and delivery of an audio-learning platform, reaching a peak of ~100k daily active users.
- **Baidu — Technical Specialist, Nuomi group-buying e-commerce platform (May 2014 – Dec 2014, China):** As project leader, re-architected the merchant-side order system on Dubbo microservices and delivered two months ahead of plan.
- **Sohu.com — Technical Leader / Project Leader, Sohu News content platform (Mar 2012 – May 2014, China):** Led the re-architecture of Sohu's fifth-generation CMS onto Spring MVC and a Redis cluster, and contributed to the design of its news publishing workflow and editorial review.
- **Renren Network — Senior R&D Engineer (Jul 2008 – Mar 2012, China):** Developed Renren's shopping website, Renren Mall and CRM.

EDUCATION, CERTIFICATIONS & LANGUAGES

- Master's degree in Computer Science and Technology — Liaoning University (2005 – 2008)
- Bachelor's degree in Applied Mathematics — Shenyang University of Technology (2000 – 2004)
- Software Designer (Intermediate) — Qualification Certificate of Computer and Software Technology Proficiency (2006) · PMP — in progress · Site Reliability Engineering (SRE) — formal training
- Languages: English and Mandarin (professional working proficiency in both)
