Payments Technology Leader — Fintech Platforms, Connected Devices & Multi-Market Delivery | Strategy · Teams · Budgets

PROFESSIONAL SUMMARY

Payments technology leader with 18+ years across a Tier-1 Singapore bank, payment-enabled SaaS and local-life platforms in Singapore, and consumer internet and IoT in China. Began as an engineer and technical lead at Renren, Sohu and Baidu, then spent 2016–2022 in head-of-technology and architect roles — heading technology for a smart-parking IoT platform, co-founding an audio-learning platform, leading VV Technology's technology organisation and architecting a multi-tenant SaaS platform.

Since 2022, a Vice President in UOB's Group Technology & Operations, owning architecture and delivery for mission-critical cross-border payment and retail lending platforms serving millions of accounts. Has decision or joint-decision authority on technology investment and vendor selection, and reports to senior management and the steering committee.

Combines regulated-bank discipline with experience of connected hardware, city rollouts, payment integrations across China and Singapore, and architecture for a B2B product serving Southeast Asia. Evaluates new technology by putting it to work — most recently a production AI code-review service inside the bank. Works in English and Mandarin.

CORE COMPETENCIES

Technology Strategy	Technology roadmaps and selection, investment priorities, platform modernisation, capacity planning, reducing technical debt on live platforms
Payments & Fintech	Cross-border payments, ISO 20022, payment initiation and validation, hand-off to core banking for settlement, card and wallet payment integrations, settlement reconciliation
Connected Devices & IoT	Car-park hardware connected to the cloud, AI processing step in licence-plate and portrait recognition, real-time sensor and transaction events, SaaS model for business and government customers
Multi-Market Delivery	Platforms for Singapore, China and Southeast Asia; technical bids, city pilots and rollouts; production support; teams in India, Thailand and Indonesia
Leadership & Budgets	Technical and delivery teams led through squad leads; mentoring and performance management; technology budget; vendor governance
Engineering Practice	Agile/Scrum, CI/CD quality gates (Jenkins, SonarQube), security testing in the pipeline, secure SDLC, delivery KPIs, DR drills, P1–P3 incident management
Architecture & AI	Cloud-native microservices, APIs, event-driven integration (Java, Spring Boot, Spring Cloud, Kafka), AWS, Kubernetes; production AI code-review agents (Claude Code)

SELECTED ACHIEVEMENTS

- **Payments platform modernisation:** Planned and architected the phased move of cross-border payments to ISO 20022 (SWIFT's MT-to-MX migration), running old and new message formats side by side: new-format messaging went live in May and August 2025, ahead of SWIFT's November 2025 deadline, and the old path was retired in August 2026 with no service interruption.
- **Technology organisation and budget:** Led VV's 140-person technology organisation through its managers and built its microservices platform from scratch, owning technology selection and the technology budget.
- **Distributed teams and governance:** Lead 25 onshore and offshore engineers through squad leads, work with teams in India, Thailand and Indonesia, and set delivery KPIs such as deployment frequency, recovery time and change-failure rate.
- **Connected devices and city rollouts:** Headed technology for AI Park's IoT platform connecting car-park hardware to the cloud, led the technical bids that won city projects in Shijiazhuang, Handan and Beijing, and launched pilots in all three (2016–2017).
- **Payments across two markets:** Designed VV's payment subsystem in Singapore, which integrated UnionPay, Visa/Mastercard, Google Pay and GrabPay payments with settlement reconciliation; earlier designed and coded Baidu Nuomi's payment-gateway integration with Alipay, WeChat Pay and UnionPay in China.
- **AI-enabled delivery:** Designed and built an AI code-review service in a MAS-regulated bank, live since May 2026 after formal architecture and risk approval; the AI never approves or merges, and senior engineers' review time fell by an estimated ~80%.
- **Security-sensitive operations:** Designed security controls — encryption of sensitive data and credential management — for payment, lending and customer-data platforms; personally led disaster recovery (DR) drills for the payment hub and real-time payment middleware, sustaining 99.9%+ availability under peak load.

PROFESSIONAL EXPERIENCE

United Overseas Bank (UOB) | Singapore — Oct 2022 – Present

Vice President (VP2) / Technical Delivery Manager — Real-Time & Payment Data Services, Group Technology & Operations

Technology leader for two mission-critical platform lines in a MAS-regulated Tier-1 bank — cross-border payments (SWIFT ISO 20022 messaging) and retail unsecured lending — serving millions of accounts.

Technology Leadership & Strategy

- Hold decision or joint-decision authority on technology investment, vendor selection and SOW/licence negotiation, and own the delivery budget.
- Chair vendor governance for four IT service vendors — periodic budget reviews, year-end performance reviews and accountability meetings.
- When the two platform lines' schedules conflict, agree MVP scope with the requirement, project and technical leads, confirm dependencies and set a sequence all parties accept.
- Own technology for retail unsecured-lending servicing — payment initiation, validation and lifecycle tracking — and post-disbursement collections across credit-card and unsecured-loan portfolios.

Architecture & Delivery

- Led end-to-end design of the payment-initiation hub (Java, Spring Boot, Apache Camel) — API contracts, orchestration, validation and status tracking — integrating digital and branch channels and reference data; it hands validated payments to core banking, which executes settlement, and processes the results returned.
- Personally built the hub's core modules — payment-transaction initiation, concurrency control, the corporate- and user-role permission matrix and processing of payment status results returned by downstream systems.
- Stay hands-on alongside delivery: review newly submitted core pull requests daily, co-design solutions with engineers, own the architecture and resolve production issues.
- Led the 10-engineer backend team of a regional customer-360 platform in production since 2022, which takes daily account summaries from core banking for portfolio analysis; personally built its data-analysis module.
- Personally built an AI agent that checks eMemo and quotation documents against each other, removing a recurring manual reconciliation task (April 2026).

Reliability & Governance

- Coordinate P1–P3 production incidents end to end — escalation, stakeholder communication, root-cause analysis and post-incident reports; with no separate SRE team, the platform teams own production support and Splunk-based monitoring.
- Run CI/CD quality gates — automated regression and penetration testing, SonarQube coverage checks and SIT/UAT sign-off for every release — under MAS TRM (Singapore technology-risk rules); contributed to bank-wide SDLC and code-review standards.
- Act as the interface between business, product, operations, compliance and engineering managers.

Golden Bridge Drive (SG) Pte. Ltd. | Singapore — Nov 2020 – Jul 2022

Project Manager & Architect

A multi-tenant SaaS platform for online-game businesses, built 0-to-1 on AWS — KYC, bonus incentives, VIP tiers, analytics and multi-channel payments.

- Led a 40-person project team, including outsourced staff, introduced Agile/Scrum from scratch and CI on Jenkins and Amazon ECR, and owned delivery budget, capacity and launch readiness.
- Architected the platform on Spring Cloud and Kubernetes behind an API gateway, with hierarchical KYC identity verification designed for many jurisdictions and multi-channel payments.
- Ran hybrid delivery — Waterfall for scope and budget, Agile sprints for execution.

VV Technology Pte. Ltd. | Singapore — Apr 2019 – Jun 2020

Head of Technical Centre

VV-Life: a local-life services platform connecting offline merchants — food, fresh produce, travel and everyday services.

- Took part in product-strategy planning and delivered the first VV-Life release in 2019, including the payment subsystem's transaction, management and reconciliation modules.
- Designed the shared back-end platform architecture (Spring Boot, MySQL cluster, Redis, RocketMQ) for a B2B online-office product serving Southeast Asia, governing solution design, cost evaluation, staffing and acceptance.
- Designed for performance with Spring Cloud microservices, Kafka-based asynchronous processing and caching that kept load off the database, bringing service response times to the millisecond level.
- Introduced CI/CD, code standards and containerised deployment with rollback on Kubernetes; defined production-incident priority levels and tiered emergency-response plans.

AI Park | China — Apr 2016 – Sep 2017

VP of Technical Department

Smart-parking IoT platform for business and government customers in China.

- Led architecture, delivery, budget and the technical team for the platform — automated car-park management, online payment and recommendations — and introduced its SaaS model.
- Added an AI processing step to licence-plate and portrait recognition to improve recognition speed and accuracy.
- Brought Spring Cloud microservices into the architecture, with Kafka for asynchronous flows and caching to shield the database, achieving millisecond-level service processing.
- Led the big-data team that processed millions of real-time sensor and transaction events (HBase, MongoDB, Spark Streaming).

EARLIER EXPERIENCE

- **Hengshunyuan Information Technology — Co-founder (Oct 2017 – Sep 2019, China):** Owned product, architecture and delivery of an audio-learning platform from market research to production, reaching a peak of ~100k daily active users.
- **Baidu — Technical Specialist, Nuomi group-buying e-commerce platform (May 2014 – Dec 2014, China):** As project leader, re-architected the merchant-side order system on Dubbo microservices and delivered two months ahead of plan.
- **Sohu.com — Technical Leader / Project Leader, Sohu News content platform (Mar 2012 – May 2014, China):** Led the re-architecture of Sohu's fifth-generation CMS onto Spring MVC and a Redis cluster, and delivered its OpenAPI messaging platform.
- **Renren Network — Senior R&D Engineer (Jul 2008 – Mar 2012, China):** Developed Renren's shopping website, Renren Mall and CRM, and designed and coded Renren Mall's payment integration with Alipay and UnionPay.

EDUCATION, CERTIFICATIONS & LANGUAGES

- Master's degree in Computer Science and Technology — Liaoning University (2005 – 2008)
- Bachelor's degree in Applied Mathematics — Shenyang University of Technology (2000 – 2004)
- Software Designer (Intermediate) — Qualification Certificate of Computer and Software Technology Proficiency (2006) · PMP — in progress · Site Reliability Engineering (SRE) — formal training
- Languages: English and Mandarin (professional working proficiency in both)
